

Covering the Databricks Lakehouse platform — releases capabilities, and engineering decisions behind them.

Technical Features

Now Generally Available

AI Search (formerly Vector Search)

Vector Search has been renamed to AI Search. You can now create full text search indexes without needing any vectors or embeddings.

BUSINESS VALUE

Lowens the barrier to building search experiences over Lakehouse data — teams no longer need embedding pipelines or vector infrastructure to stand up high-quality search, cutting both engineering effort and cost.

Generally Available · Unity Catalog

Token Auto-Scoping for Personal Access Tokens

Auto-scoping automatically applies the principle of least privilege to personal access tokens (PATs) by observing which API endpoints a token uses and narrowing its permissions to just those APIs.

BUSINESS VALUE

Reduces security exposure from over-permissioned tokens without manual scoping work — a meaningful win for security and compliance teams managing API access at scale.

→ [Databricks_doc](#)

Generally Available · Integrations

Databricks Connector for Microsoft Power Platform

The Databricks connector for Microsoft Power Platform is now generally available, and OAuth can now be used to authenticate the connection as an alternative to personal access to tokens.

BUSINESS VALUE

Lets Power Apps, Power Automate, and Power BI teams build directly on governing Lakehouse data with stronger, token-free authentication — extending Unity Catalog governance into the Microsoft ecosystem.

→ [Databricks_doc](#)

Catalog Explorer · Productivity

Column Popularity in Catalog Explorer

Column popularity is now available on a table's Overview tab, ranking columns by how often they're read in queries.

BUSINESS VALUE

Helps data teams quickly identify which columns matter most for documentation, optimization, and governance priorities — no manual usage analysis required.

→ [Databricks_doc](#)

Lakebase · Pricing & Capability Update

Lakebase Autoscaling — Postgres 18 Support, Billable Snapshots

Lakebase Autoscaling now supports Postgres 18 (Postgres 17 remains default). Starting June 1, 2026, snapshot storage is also billable, with usage visible on the Backup & Restore page.

BUSINESS VALUE

Keeps Lakebase current with the latest Postgres engine while shifting snapshot storage to transparent, usage-based pricing — teams should review snapshot retention policies ahead of cost impact.

→ [Databricks_doc](#)

Beta · Lakeflow Connect

Incremental Ingestion for Workday Reports

The Workday Reports connector now supports incremental ingestion in Beta. With a configured cursor column, only changed rows since the last run are ingested.

BUSINESS VALUE

Cuts ingestion compute and runtime for Workday data by avoiding full re-pulls on every run — directly reduces pipeline cost for HR/finance data sources.

→ [Databricks_doc](#)

Beta · Lakeflow Connect

New Managed Connectors: Square, Wiz Audit Logs, Salesforce Marketing Cloud, Slack Access & Integration Logs

Four new managed ingestion connectors landed in Beta this month — Square, Wiz Audit Logs, Salesforce Marketing Cloud, and Slack Access and Integration Logs — for ingesting business, security, and compliance data into Unity Catalog without custom connector code.

BUSINESS VALUE

Expands no-code ingestion coverage across commerce, security auditing, marketing, and collaboration tool data — reducing engineering backlog for common source systems.

→ [Databricks_doc](#)

Unity Catalog · Governance · Public Preview

Metastore-Level Access Requests & Discover Page

Access requests can now be enabled at the Unity Catalog Metastore level, with a destination inherited by all catalogs and schemas underneath. Separately, the new Discover page (Public Preview) gives users a curated way to browse governed data assets — organized into domains and subdomains — without needing to know the catalog hierarchy.

BUSINESS VALUE

Simplifies access governance at scale and makes self-serve data discovery viable for non-technical users, reducing reliance on tribal knowledge of catalog structure.

In-General / Business-Focused Features

Pricing Change · Effective July 6, 2026

Genie Moves to Pay-As-You-Go Pricing

Genie products are moving to a pay-as-you-go pricing model on July 6, 2026. Each user gets 150 free DBUs of LLM usage per month (~\$10.50 in US East); usage beyond that is billed in DBUs. Admins can now create Genie-scoped budgets with email alerts and per-user spending limits ahead of the change.

BUSINESS VALUE

Gives finance and platform teams a runway to set guardrails before billing changes take effect — budget scoping by workspace, group, or user prevents surprise spend as Genie adoption grows.

→ [Databricks_doc](#)

Genie Code · Productivity

Auto-Approve Mode for Genie Code

Genie Code now offers an auto-approve mode that lets tool actions (running code, editing notebooks) proceed without per-action prompts. An AI classifier screens each action and blocks risky ones. Note: this is a productivity feature, not a security boundary.

BUSINESS VALUE

Speeds up agentic coding workflows for trusted, repetitive tasks, though teams should keep using proper access controls rather than relying on auto-approve for security enforcement.

→ [Databricks_doc](#)

AI/BI · Genie One

Genie One — Chat Sharing & New External Source Connections

Genie One chats can now be shared with all account users as read-only. Chat in Genie One also gains Beta connections to Gmail and additional Microsoft 365 apps (Teams, Outlook, Calendar). Scheduled tasks are now capped at daily frequency (hourly/per-minute scheduling has been removed).

BUSINESS VALUE

Broadens Genie One as a cross-functional assistant by pulling in everyday business tools, while the scheduling cap reins in cost and load from overly frequent automated tasks.

→ [Databricks_doc](#)

Lakeflow · Coming Late July 2026

Lakeflow Designer Reaches General Availability

Lakeflow Designer — a visual, no-code, drag-and-drop canvas for preparing and transforming data, fully backed by production-ready code governed by Unity Catalog — is now generally available, with default rollout to compliance-profile workspaces planned for late July.

BUSINESS VALUE

Opens pipeline-building to non-engineers (analysts can build, preview, and schedule transformations using built-in operators or natural language), while keeping output as governed, production-grade code under the hood.

Marketplace

DATA**BRICKS** DIGEST

JUNE 2026
Lakehouse Platform Intelligence

Solution Accelerators Reclassified; Universal Commit Drawdown Expanded

Solution Accelerators are no longer a separate Marketplace listing type — they're now categorized as apps or notebooks. Separately, customers can now use up to 10% of Universal Commits to purchase eligible third-party partner products through Databricks Marketplace.

BUSINESS VALUE

Simplifies Marketplace browsing and gives customers more flexibility to apply existing committed spend toward partner tooling, rather than treating it as Databricks-only spend.

→ [Databricks_doc](#)

Governance · Compliance

Data Classification On by Default for Compliance Workspaces

Data Classification is now enabled by default for some workspaces with the compliance security profile enabled.

BUSINESS VALUE

Reduces setup burden for regulated customers by automatically classifying sensitive data, supporting audit and compliance requirements out of the box.

Note: Full release notes (staged rollout, may take a week or more to appear in your account) are available at the source link below.

DATABRICKS DIGEST

JUNE 2026
Lakehouse Platform Intelligence

DAIS 2026

What's New at DAIS 2026 —
A complete review of every major announcement from the Data + AI Summit.

JUNE 2026

30,000+ Attendees
150+ Countries
800+ Sessions

Platform direction: Databricks is now the operating layer for enterprise AI — agentic AI is production-ready (Agent Bricks, Genie One, Omnigent), the data stack is converging (LTAP, Lakebase, Lakehouse//RT), and governance is the competitive moat (Unity AI Gateway, UC Metrics, LakeWatch).

DAIS 2026 HIGHLIGHTS

GENIE FAMILY · GA

Genie One

[Databricks doc](#)

DAIS OUTCOME Becomes an always-on AI coworker — creating docs, running tasks, and deploying agents across web, Slack and Teams.

AGENT INFRA · GA

Agent Bricks

[Databricks doc](#)

DAIS OUTCOME Gives enterprises one governed platform to build and monitor agents — already running 100,000+ agents in production.

GOVERNANCE · BETA

Unity AI Gateway

[Databricks doc](#)

DAIS OUTCOME Puts spend caps, smart routing, and PII/prompt-injection guardrails in front of every model and agent call.

DATA INFRA · COMING SOON

LTAP

[Databricks doc](#)

DAIS OUTCOME Unifies transactional and analytical processing on one data copy — no CDC, no ETL, ~50-70% lower infra cost.

QUERY ENGINE · BETA

Lakehouse//RT (Reyden)

[Databricks doc](#)

DAIS OUTCOME Hits sub-100ms latency at 12,000 QPS — up to 16x faster than dedicated real-time stacks.

GOVERNANCE & SECURITY

LakeWatch

[Databricks doc](#)

DAIS OUTCOME Runs security analytics directly on the Lakehouse, cutting SIEM TCO up to 80% vs. Splunk/QRadar.

GENIE FAMILY · PUBLIC PREVIEW

Genie Ontology

[Databricks doc](#)

DAIS OUTCOME Grounds every agent answer in a live knowledge graph, lifting accuracy to 84.5% vs. 52.4% for generic agents.

AGENT INFRA · BETA · OSS

Omnigent

[Databricks doc](#)

DAIS OUTCOME Lets teams compose and control multiple coding agents (LangGraph, CrewAI, Claude Code) from one open-source harness.

GOVERNANCE · GA

UC Metrics

[Databricks doc](#)

DAIS OUTCOME Lets teams define a KPI once in Unity Catalog and get the same governed number in Genie, AI/BI and every agent.

DATA INFRA · GA

Lakebase

[Databricks doc](#)

DAIS OUTCOME Delivers a serverless Postgres database built into the Lakehouse, with zero-copy branching in under 500ms.

GENIE FAMILY · BETA

AI/BI Migration

[Databricks doc](#)

DAIS OUTCOME Turns a Tableau or Power BI import into a governed AI/BI dashboard, cutting migration from months to days.

ECOSYSTEM

Free Edition Expansion

[Databricks doc](#)

DAIS OUTCOME Adds Genie Code, Agent Bricks, Lakebase, Serverless GPUs and Lakeflow Designer free for 500,000+ developers.

DATA**BRICKS** DIGEST

JUNE 2026
Lakehouse Platform Intelligence

GENIE FAMILY

Genie ZeroOps

[Databricks doc](#)

DAIS OUTCOME Cuts platform ops costs and toil by letting autonomous agents self-heal pipelines in sandboxed isolation before any change touches production.

ECOSYSTEM

Lakeflow Connect & Designer

[Databricks doc](#)

DAIS OUTCOME Collapses data integration from weeks to hours with 30+ managed connectors in a no-code, AI-native, UC-governed builder.
